Professional Summary

Results-oriented DevOps Engineer with 5 years of experience in AWS, GCP, and Azure. Developed self-service platforms that reduced provisioning time significantly. Implemented Crossplane and GitOps across 90+ production clusters, achieving substantial cloud cost reductions. Led platform migrations and mentored engineers, utilizing Kubernetes, Terraform, and secure CI/CD practices.

Work History

DevOps Engineer, 11/2024 to Current
Deloitte Shared Services India LLP – Bengaluru, India

- Created self-service provisioning APIs with Crossplane (XRDs, Compositions, Claims) so developers provision AWS infrastructure on demand via kubectl.
- Orchestrated the cluster add-on lifecycle with FluxCD (HelmReleases, OCI repositories), running zero-downtime rolling upgrades of Traefik, CSI drivers, and Crossplane providers.
- Designed approval-gated Azure DevOps release pipelines with reusable YAML templates and Azure Key Vault for secrets.
- Deployed Azure DevOps on self-hosted Kubernetes agents for elastic, on-demand build capacity.
- Automated Helm rollouts, patches, and rollbacks across the cluster fleet with Ansible.
- Led migration of all cluster components from vanilla Kubernetes to Amazon EKS and onboarded customer teams.
- Provisioned EKS clusters with Cluster API Provider for AWS (CAPA), standardizing declarative, GitOps-driven cluster lifecycle across environments.
- Authored Ginkgo/Gomega E2E test suites run via Jenkins to cover platform features and add-ons.
- Implemented External DNS across the fleet, eliminating manual DNS entries.
- Engineered a highly available Jenkins-on-Kubernetes CI/CD platform with dynamic PodTemplate agents for on-demand scaling.
- Integrated a DevSecOps toolchain (Trivy, SonarQube, Snyk) into pipelines for vulnerability scanning and code-quality gates.
- Established a central Crossplane control plane with RBAC, admission policies, and ArgoCD for safe multi-tenant self-service.
- Maintained GitOps pipelines with ArgoCD (auto-sync, self-heal, prune) for continuous drift correction.
- Developed reusable Terraform modules for AWS (EC2, VPC, IAM, EKS, RDS) and GCP (GKE, Cloud SQL, IAM, VPC) with policy gates in Jenkins and GitHub Actions.
- Shipped AI-powered platform tooling (Kubernetes troubleshooting and AWS cost-analysis agents) on open-source LLMs and AWS Bedrock as an optional add-on.

DevOps Engineer, 09/2021 to 11/2024
LogusIMS Technologies Private Limited – Bengaluru, India

- Operated AWS infrastructure across 20+ services supporting production workloads over multiple years of continuous operation.
- Engineered CI/CD with Jenkins, GitHub Actions, GitLab CI/CD, and AWS CodePipeline, standardizing build, test, and deploy stages.
- Optimized AWS ECS workloads (EC2 and Fargate) with ECR lifecycle policies to cut stale-image storage costs.
- Scripted Ansible playbooks for configuration management, cutting environment setup from hours to minutes.
- Provisioned GCP with Terraform (VPC, secondary ranges, GKE, Cloud SQL, IAM) on a GCS remote-state backend with state locking.
- Designed VPC-native private GKE clusters with dedicated pod/service ranges, private nodes behind Cloud NAT, and multiple node pools on least-privilege service accounts.
- Implemented approval-gated Terraform delivery in Cloud Build, where a reviewed plan stored in GCS is applied by a separate, approval-gated pipeline to prevent drift.
- Delivered container CI/CD with Cloud Build and Cloud Deploy, pushing to Artifact Registry with auto-rollout to dev, manual approval before prod, and rollback.
- Configured Cloud Build on a VPC-peered private worker pool to reach private GKE, Cloud SQL, and internal endpoints.
- Exposed applications via GKE Ingress (managed HTTP(S) Load Balancer) and a custom external HTTP(S) Load Balancer with unmanaged instance groups and health checks.
- Provisioned private Cloud SQL (PostgreSQL) and Memorystore (Redis) over Private Service Access, keeping credentials in Secret Manager.
- Implemented Pub/Sub messaging (topics, subscriptions, dead-letter, retry) and deployed Cloud Run with public endpoints and VPC egress via a Serverless VPC Access connector.
- Configured Cloud Monitoring and Cloud Logging (dashboards, log-based metrics, uptime checks, alerting) and used Workload Identity for keyless auth with least-privilege IAM.
- Administered Linux servers (SSL/TLS, Nginx/Apache, multi-version PHP/Python, cron, NFS/FTP) to sustain high availability.
- Operated Prometheus, Grafana, and CloudWatch monitoring with proactive alerting to reduce mean time to detect (MTTD).
- Provided L2/L3 support for pipeline and infrastructure incidents and wrote SOPs and rollback playbooks to reduce mean time to recovery (MTTR).
- Hardened AWS IAM with fine-grained roles and MFA enforcement, with no reported unauthorized-access incidents in production.
- Supported customers across multiple regions on Docker, Kubernetes, and VMs, holding consistent performance across 8+ concurrent environments.

- Launched complete platforms from scratch — provisioning, CI/CD, monitoring, security hardening, and go-live — through standardized runbooks.

Education

Bachelor of Science (B.Sc.): Computer Science, 01/2019
ANU University - Vinukonda, Andhra Pradesh, India
GPA: CGPA 9.19/10

Accomplishments

- Reduced cloud spend by 30–45% through right-sizing (Goldilocks) and FinOps tooling.
- Cut the infrastructure request backlog and turnaround from days to hours with self-service Crossplane provisioning across AWS, GCP, and Azure.
- Standardized out-of-the-box Grafana dashboards, datasources, and alerting across 90+ clusters.
- Shortened release cycles from days to hours using dedicated release branches with GitOps automation (FluxCD/ArgoCD).
- Enforced DevSecOps standards (Trivy, SonarQube, Snyk) across 8+ customer pipelines, blocking critical vulnerabilities before production.
- Migrated the platform from vanilla Kubernetes to Amazon EKS, onboarding teams with minimal service disruption.

Skills

- AWS
- GCP
- Azure
- Kubernetes
- Docker
- Terraform
- CloudFormation
- Crossplane
- ArgoCD
- FluxCD
- Jenkins
- GitHub Actions
- Ansible
- Prometheus
- Grafana
- Trivy
- SonarQube
- Snyk
